

AIRnID Value Proposition

Username & Password are still the most prevalent access gateways to our digital world. NimbusID is in the business of making sure the physical person trying to login is in fact that rightful owner of the credentials being used.

This crucial step of ID verification is the most common step hacked by the bad guys. Many of us are already aware, if the username and password are compromised it paves the way for identities to be stolen.

Listed are a few of the more common cyber security areas AIRnID will have a direct effect in helping mitigate identity issues.

Shared Credential Use

Stolen Credential Use

Online Transaction Fraud

Insider Threat

Privileged Access Management

Advanced Persistent Threats

Asset Management Programs

Malware, Hackers, Trojans

Your Life – Your Mind – Verifying Your Identity
