Cognitive Identification (CogID)

" how our unique knowledge can be processed to verify our physical & digital identity"

CogID is the use of Association, Interpretation & Recognition (AIR) to process discrete knowledge of a person to uniquely verify their physical and digital identity.

CogID can be used as a Static Gateway Identity Verification layer for the Internet of Things (IoT's)

CogID can be used as a Continuous Identity Verification layer for entire network sessions

CogID can be integrated with Identity & Access Management and Biometric security solutions

Your Life – Your Mind – Verifying Your Identity
