

CognitiveID

“How our unique knowledge can be processed to verify our physical and digital identity”

CognitiveID is the application of Association, Interpretation & Recognition (AIR) to process discrete unique knowledge of a person to uniquely verify their physical and digital identity

CognitiveID can be used as a Static Gateway Identity Verification layer for the Internet of Things (IoT's)

CognitiveID can be used as a Continuous Identity Verification layer for entire network sessions

CognitiveID can be integrated with Identity & Access Management and Biometric security solutions
